REPORT OF INDUSTRIAL VISIT ON 17TH SEPT, 2010 AT JOSEPH CYRIL BAMFORD, BALLABHGARH

Founded in 1916, what began in garage of 12 feet by 15 feet back in 1945 today manufactures over 220 models of construction and agricultural equipment on four different countries bases in the UK, the US, India and South America.

This was the first thing which students came to know through HR manager of JCB in his presentation. When at 8:00AM the students of Tecnia Institute of Applied Studies were heading towards JCB one thought which was coming in their mind was that why visiting were JCB is it has that plenty of enrichments which can satisfy the needs of management's students. But as they saw the building of JCB in Ballabhgarh., they got amused because in India it the largest manufacturing facility of this company and still they maintained quality as well as they are maintaining their eco friendliness. After a small presentation by HR, we entered the manufactured plant. There they saw that how amazing machines is built and its part by part generation of the whole machine.

Students visited the welding line in which parts were cut through larger Robots and then welded them, then they saw assembly line where all parts were assembled. After that they came to know their powder coating line which was for non-rusting ness of machine.

At last they saw how machine works in reality and tried out hands in driving that machine that was full of fun.
